MUSD Pocket

MEZO BUILDATHON · WAVE 2 · ACCESS & DISTRIBUTION

Bitcoin-backed savings goals, built on Mezo.

Save in MUSD toward a goal with a date. Borrow into it against your BTC without selling. Let friends and family anywhere chip in with a link.

- Live on Mezo testnet 31611
- MUSDPocketV2 verified

Live app, captured 3 Nov 2026

musd-pocket-mezo.vercel.app

01 THE PROBLEM

Saving for a date is hard when your money is either volatile or loose.

01

Selling BTC to pay for life

People who hold Bitcoin and need cash for a deposit, a trip or school fees usually sell, and give up the upside they waited for.

02

Stable dollars drift away

Stablecoins sitting in a wallet have no date and no lock. Without a commitment built in, savings quietly turn into spending.

03

Family help lives off-chain

When parents, siblings or friends want to help, it happens through bank transfers and group chats, with no shared view of progress.

The gap: Mezo already gives Bitcoin holders a dollar, MUSD. What is missing is a friendly savings layer that gives that dollar a purpose and a date.

02 THE SOLUTION

MUSD Pocket turns MUSD into goals people actually keep.

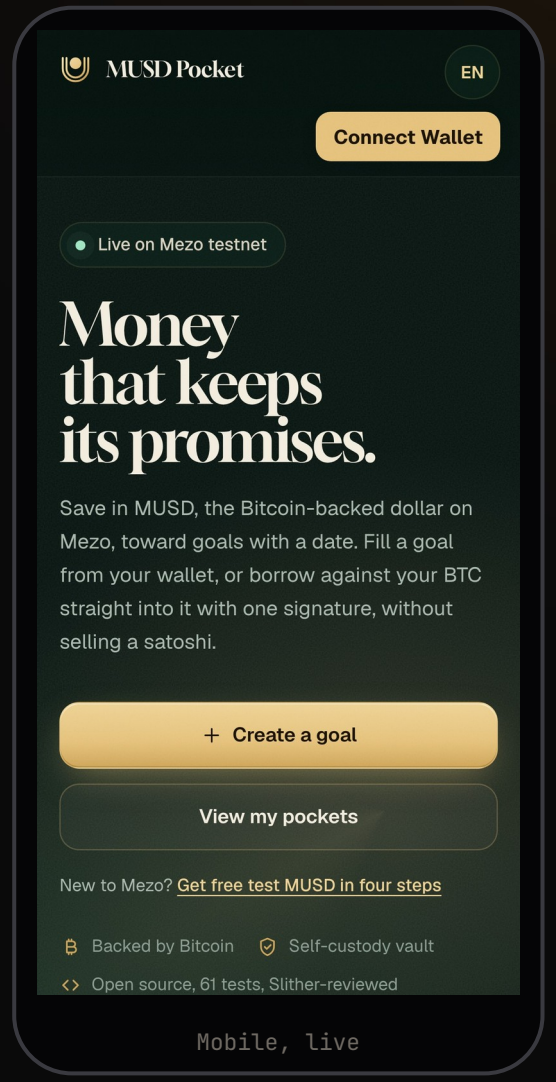

1. **Savings goals in MUSD**
   Name a goal, set a target and an unlock date. Withdraw on time for free, or early for a 2% fee.

2. **Borrow into a goal**
   Borrow MUSD against your BTC with one Mezo signature. It lands straight in the goal, so nothing is sold.

3. **Chip in by invite link**
   Share a link. Anyone can read the goal without a wallet, then follow a guided testnet setup to chip in.

4. **Protect my loan**
   Live ICR and liquidation price, with one click to add collateral or repay before things get tight.

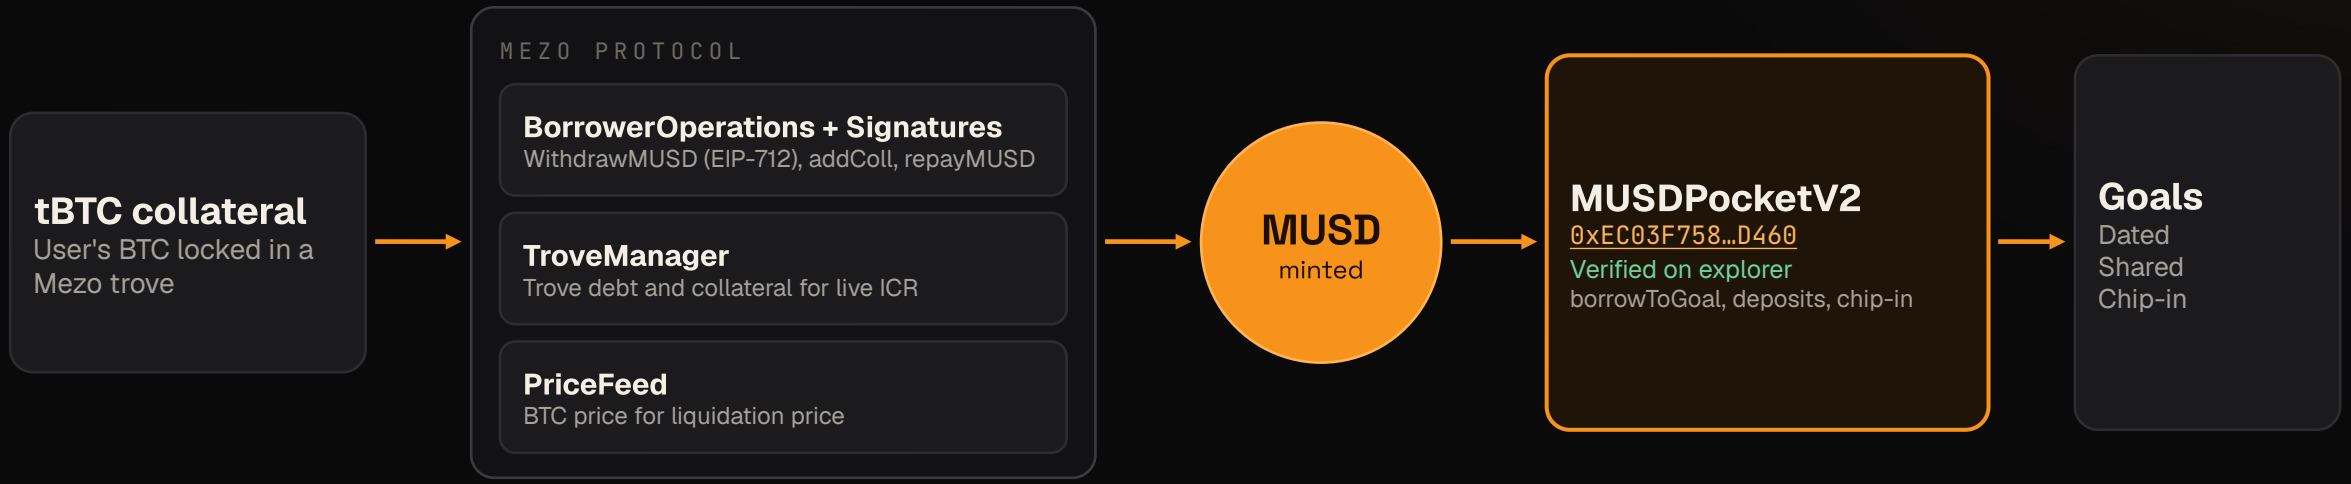

Global by default: English, Spanish, Portuguese, Chinese and French on key screens. Gas is paid in BTC on Mezo.

Mobile, live

03 HOW IT COMPOSES WITH MEZO

Built on Mezo's core contracts, not beside them.

Protect my loan reads TroveManager and PriceFeed for ICR and liquidation price, previews both, then calls addColl or repayMUSD on BorrowerOperations. borrowToGoal reverts below 150% ICR.

Any size Wallet MUSD can go into a goal with a plain deposit. No trove needed.

sMUSD Savings Vault: gated Turns on only if vault code exists on the connected chain. Testnet 31611 has none, and the app says so. sMUSD does not raise ICR; collateral is BTC only.

04 WAVE 1 FEEDBACK, ANSWERED

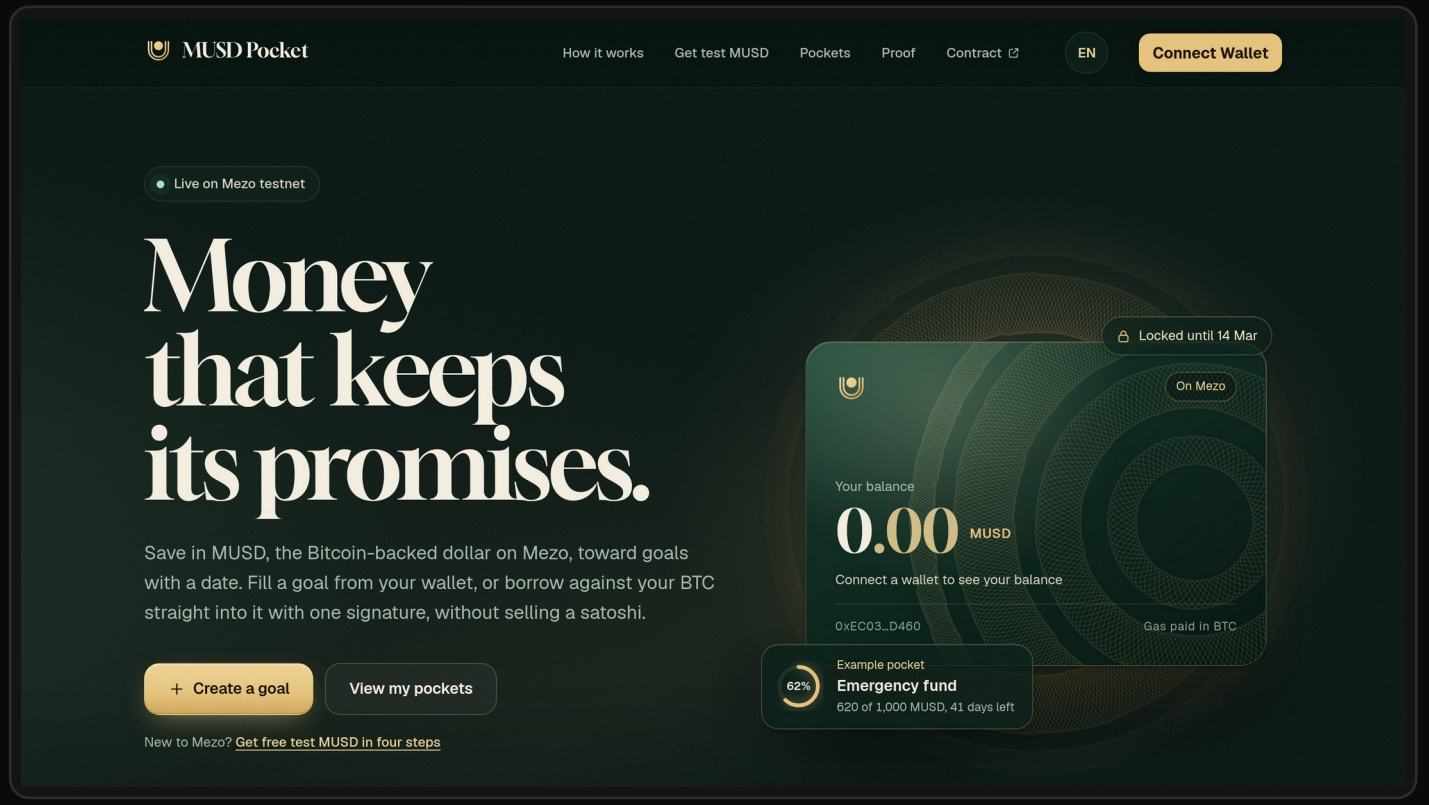

Every point from Wave 1 review, and what changed.

WHAT JUDGES ASKED	WHAT WAVE 2 SHIPS	STATUS
Integration was L2: plain ERC-20 MUSD only	borrowToGoal composes BorrowerOperationsSignatures WithdrawMUSD; Protect calls addColl and repayMUSD	Fixed
Borrow-into-goal source not in repo, unverified, unused	MUSDPocketV2.sol in repo, verified on explorer, wired into the goal card and exercised on-chain	Fixed
No live ICR or liquidation price	Read from TroveManager and PriceFeed and previewed before every send	Fixed
Consider the MUSD Savings Vault	Honest sMUSD panel behind a code check; never claims an ICR benefit	Fixed
Live link collided with another team	One primary URL everywhere: musd-pocket-mezo.vercel.app	Fixed
Debt floor clarity	Loan readiness panel: 1,800 + 200 gas deposit, about 2,000 MUSD; small goals keep plain deposit	Fixed
Label testnet vs mainnet	Testnet badge in the app footer, README, tester guide and this deck	Fixed
Real users beyond two wallets	Own wallets labelled as mine; community tester section live and empty; tester guide ready	Open, honest

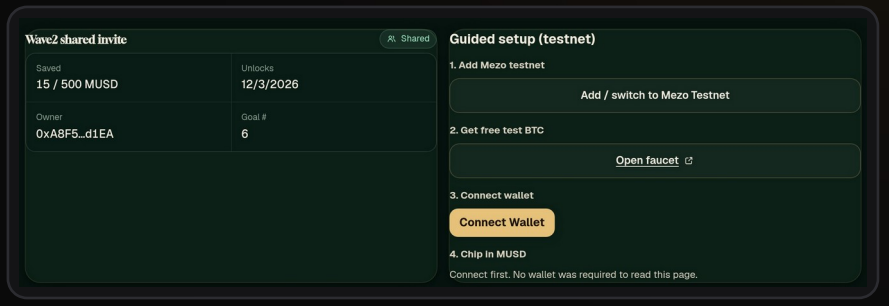

Thanks to the civ_defi_mezo review and builder notes from dsh_agent (MezoGig) for the precise feedback.

05 LIVE PRODUCT

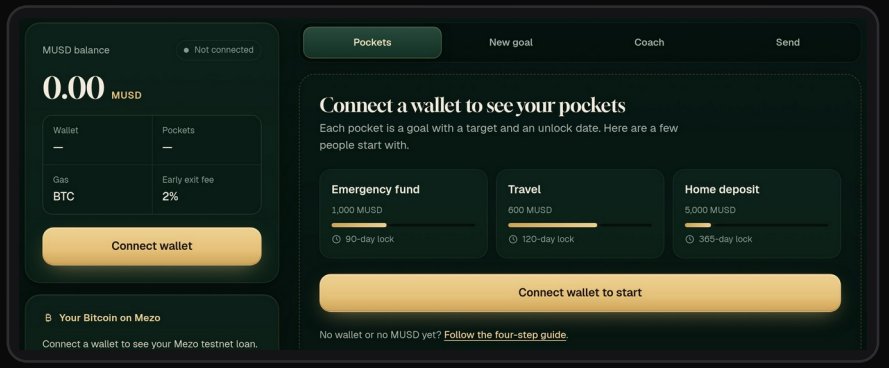

The live app today, no wallet required to look around.

Home: save in MUSD toward a date, or borrow against BTC into a goal

Invite link: a friend reads the shared goal, then gets a guided testnet setup

Pockets: dated goals, 2% early exit fee shown up front

06 ON-CHAIN PROOF

Every Wave 2 path has a transaction you can open.

Mezo testnet 31611, exercised 3 Nov 2026 (Asia/Calcutta) from builder test wallets. Click any hash.

borrowToGoal 5 MUSD into goal #7	0x15ee0df8…ba7f	Pocket + BOS
addColl 0.001 BTC (Protect)	0x2da3e123…0c22	BorrowerOps

THE CONTRACT

MUSDPocketV2

0xEC03F758219746b6e773
f107a05cF17b66E7D460

- Source verified on explorer.test.mezo.org
- Source in repo: contracts/src/MUSDPocketV2.sol
- 47 Foundry + 22 vitest tests passing
- Slither output kept in docs/

Deploy tx 0xa58ddba9…64f6

Close trove is wired in the UI but not re-run this wave: the test wallet lacked spare test BTC.

07 DEBT FLOOR HONESTY

We say the debt floor out loud, before anyone signs.

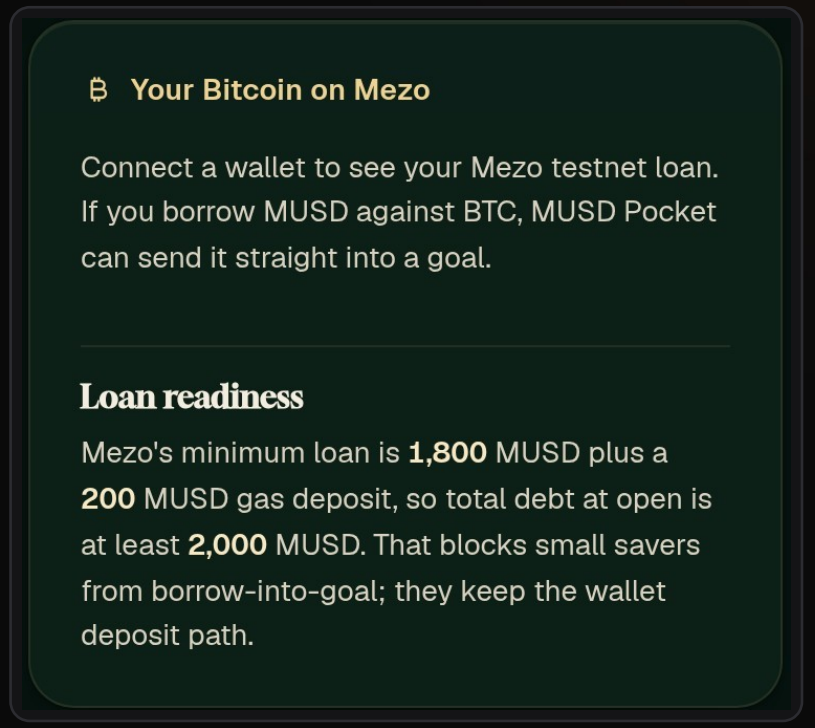

~2,000

MUSD minimum total debt to open a Mezo trove

1,800
minimum principal

+ 200
gas deposit, refunded on close

So borrow-into-goal is for people who already have, or will open, a trove of that size. Everyone else still saves: wallet MUSD goes into a goal by plain deposit, any amount.

In the app: the loan readiness panel explains the floor; repay keeps net debt above 1,800, as Mezo requires; sMUSD is never sold as a way to lift ICR.

08 REVENUE MODEL

Revenue that rewards keeping the promise.

2%

early-unlock fee on the locked balance

We earn only when someone breaks their own goal early. Saving on time and helping a friend stay free. Fees accrue on-chain in the contract fee pool, visible to anyone.

2%

Early unlock

Live in the contract

5%

Contract cap

Hard maximum in code

0%

Chip-in

Family and friends

0%

On-time unlock

Keep your promise, pay nothing

Being explored, not live: an optional chip-in tip, and paying bills or merchants into a goal. Neither is counted here.

09 POSITIONING

Where we fit, next to strong Mezo builders.

PROJECT	WHAT THEY DO WELL	WHERE MUSD POCKET SITS
Feasy	BTC savings vault: trove, sMUSD and a veBTC sleeve	Pooled vault. We focus on named, dated personal goals and family chip-in.
MezoRoute	Mainnet executor that compares earn routes and borrows and deploys	Built for DeFi routing. We are a consumer savings front door.
Pylon	Flash loop, unwind and shield on native troves	Power-user leverage. We keep risk low and visible for savers.
Doji	veBTC lock-and-borrow with PriceFeed auctions	Different user. We bring new savers to MUSD; the two can complement.

Our lane: the consumer savings layer for Mezo. Dated goals, family chip-in and optional borrow-into-goal, with honest risk and no yield claims. More people holding MUSD for a reason helps every product above.

10 TRACTION, HONESTLY

Builder test wallets only so far. No fake users.

5

builder test wallets

all labelled as mine

10

Wave 2 lifecycle txs

on MUSDPocketV2 and Mezo

19

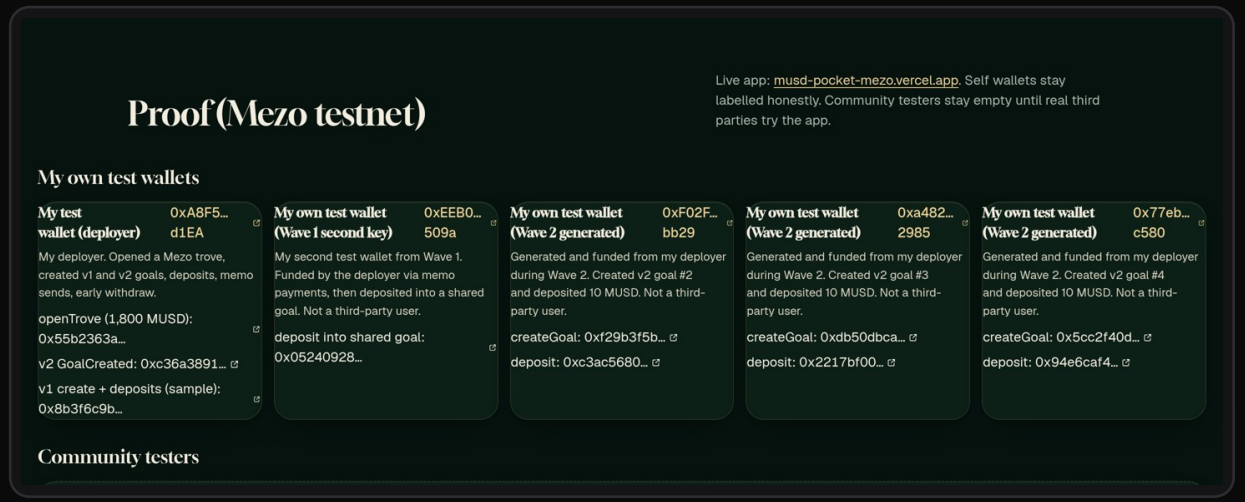

Wave 1 txs

kept on v1 for history

0

community testers

today. Section is open

Community tester section: open

- The Proof page keeps my wallets apart from real third parties.
- A tester guide (docs/TESTER-GUIDE.md) walks a friend through network, faucet and chip-in.
- Next target: 3 to 5 outside wallets, each listed with explorer links.

11 ROADMAP AND TEAM

From testnet goals to mainnet, with Mezo.

NOW

Wave 2 live on Mezo testnet

Verified contract, borrow-into-goal, Protect, invite chip-in

NEXT

Real outside testers

3 to 5 friends on testnet, listed with explorer links, plus a short demo video

THEN

Deeper Mezo

sMUSD routing for locked goals where vault code exists; Mezo Passport for BTC wallets

MAINNET

Careful launch

Mainnet deploy after more review, as a deliberate builder decision

AFTER

Mezo Founder Program

Apply with Wave 2 proof as the next step for the product

TEAM
