

MUSD Pocket

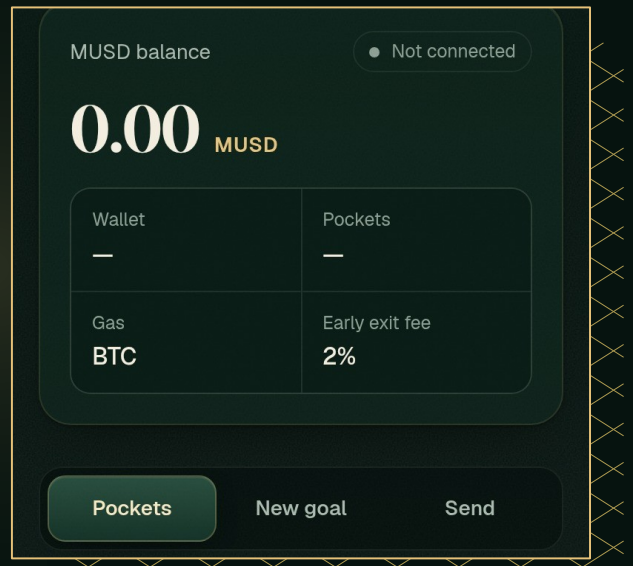

Bitcoin-backed savings goals and payments for everyone,
powered by Mezo MUSD.

MEZO BUILDATHON · ACCESS & DISTRIBUTION TRACK

Balances, not plans

Stablecoins move value well. They do not help people plan it, protect it, or say what it was for.

01 No goals, no lock

People everywhere save toward dated goals: an emergency fund, travel, a home deposit. Stablecoin wallets show one balance, with no goals and no lock against impulse spending.

02 No memo, no why

Money sent to family and friends shows up as anonymous hex on an explorer, with no memo saying what it was for.

Money that keeps its promises

01 Time-locked goals

Lock MUSD toward a goal with a date. It stays put until the day you set.

02 Shared goals

Family or friends' wallets deposit into one goal and save toward it together.

03 Memo payments

Send MUSD with an on-chain memo, like "Rent buffer Oct", readable on the explorer.

04 Early withdraw

Need it sooner? Withdraw early for a 2% fee, capped at 5% in the contract, so the habit holds.

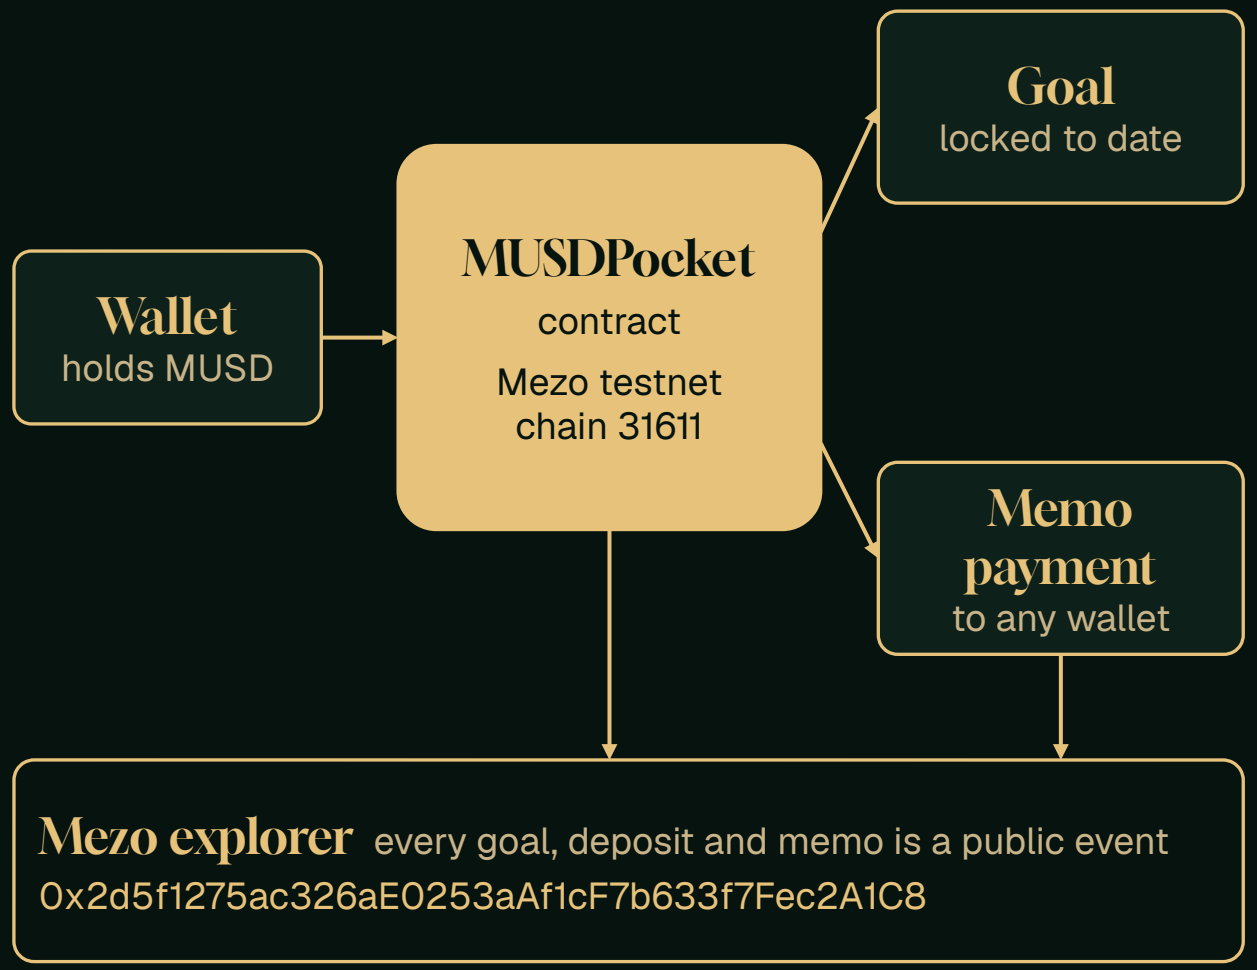

How it runs on Mezo

01 Create a goal, deposit MUSD

The user creates a goal and deposits MUSD into the MUSDPocket contract on Mezo testnet (chain 31611).

02 Lock it, or send with a memo

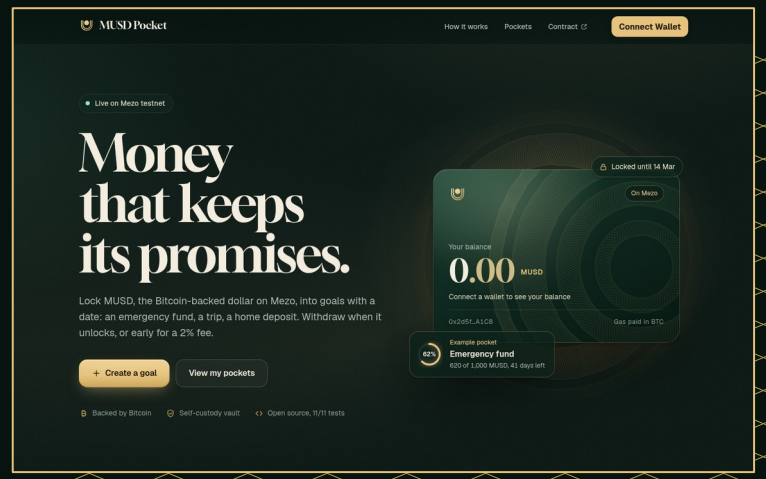

Funds stay locked until the goal's date, or leave early with the 2% fee. Memo payments send MUSD wallet to wallet, with the memo emitted on-chain.

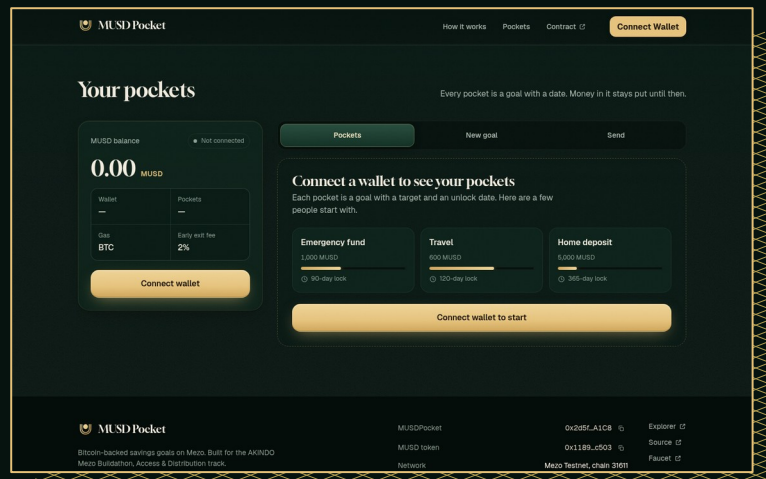

Live on testnet today

Real screens from the deployed app: the landing page, your pockets, and the new-goal flow.

01 Landing

02 Your pockets

03 New savings goal

Proof it works

The books balance on-chain: the contract holds 842 MUSD, exactly the 250 + 240 + 350 in open goals plus the 2 MUSD fee pool.

19

on-chain transactions

All succeeded on Mezo testnet: a MUSD borrow, goals, a shared goal, two memo payments and an early exit.

24/24

Foundry tests passing

11 lifecycle tests plus 13 security tests, including fuzzed fee-cap and accounting checks.

Security review Slither (no High findings) + manual review, 21 Oct 2026. Not a professional audit; external review before mainnet.

Revenue that rewards patience

Early-exit fee
live on testnet

Leave before the goal's date and 2% goes to the fee pool. Capped at 5% in the contract; only the pool is claimable, never principal.

Share of savings yield
planned for Wave 2, not live

Route locked goal balances into the MUSD Savings Rate vault so goals earn, and keep a small protocol share of that yield.

Premium AI savings coach
future option

An optional paid tier that helps users plan goals and automate their MUSD saving.

Who it's for

People who want their MUSD to wait for a purpose, not sit as a balance.

Global savers

Build an emergency fund in MUSD and lock it so it is there when life happens.

Families

Pool toward one shared goal, such as a home deposit, with each member adding MUSD.

Freelancers

Paid in crypto, they set aside rent and tax in dated goals as each payment lands.

From testnet to everyday saving

Wave 1 · Oct 2026

Live on testnet

Deployed on Mezo testnet with real on-chain transactions and a Slither + manual security review.

Wave 2 · Nov 2026

Mainnet and yield

Mainnet launch with an external review. Locked goal balances earn through the MUSD Savings Rate vault.

Next

AI savings coach

Helps users plan goals and automate their MUSD saving.

Later

BTC to MUSD in-app

Swap BTC for MUSD inside the app, plus one-click on- and off-ramps.

Thank you

Bitcoin-backed savings goals and payments for everyone.
